

Josiah Rhodes

I.T. / Cybersecurity / Software Engineer
918-853-6760 | Josiahrhodes160@gmail.com | GitHub: Jojo174Code | Website: <https://jojo174code.github.io/>

Skills

Network Security | Penetration Testing | Python & C# Programming | Linux & Windows Administration | Wireshark & Packet Analysis | SQL & Database Management | Virtualization (VMware, VirtualBox) | Cloud Platforms (AWS, Azure) | Git & Version Control | Vulnerability Assessment | Project Management | Software Development

Education

Will Rogers High School

2018-2022
GPA: 3.7

Computer Information Systems, AS

Carl Albert State College, 2022-2024
GPA:3.8

Cybersecurity, AAS

Carl Albert State College, 2022-2024
GPA:3.8

Cybersecurity, BS

The University of Oklahoma 2024-present
GPA: 4.0

Projects

(all projects can be viewed on GitHub)

Anime Database

– Developed a full-stack web application using **PHP**, **MySQL**, and **Bootstrap** to store, display, and manage anime entries. Features include image uploads, search functionality, and a responsive dark-themed UI.

Network Packet Analyzer

– Built a web-based packet capturing tool using **Python** and **Scapy** with a real-time dashboard. Includes filtering, auto-refreshing tables, and traffic visualization for analyzing network activity.

Hangman Game

– Created a console-based Hangman game in **C#** featuring user input validation, word randomization, and a dynamic guessing interface.

Text-Based Adventure Game

– Developed an interactive adventure game using **Bash scripting on Linux**, featuring decision trees, user prompts, and branching storylines within the terminal.

DDoS Attack Lab

– Conducted a simulated Distributed Denial-of-Service (DDoS) attack in a controlled lab environment to analyze network vulnerabilities, traffic patterns, and mitigation techniques using tools like LOIC and Wireshark.

Cross-Site Scripting (XSS) Lab

– Performed and mitigated XSS attacks in a sandboxed web environment to understand input sanitization, JavaScript injection, and web application security best practices.

Encryption / Asymmetric Encryption Lab

– Implemented and analyzed public/private key encryption to securely transmit data, demonstrating foundational cryptographic principles and secure communication practices.

Encryption Tool

– Developed a **Python** utility to encrypt and decrypt files using password-based encryption, showcasing secure file handling and basic cryptographic implementation.

Professional Summary

Motivated cybersecurity student with a strong foundation in network security, ethical hacking, and software development. Experienced in building full-stack applications, security tools, and lab-based simulations. Passionate about protecting digital systems and continuously learning in fast-paced, tech-driven environments.
